

## Euclidis Opera Omnia VOL 1

### CHANGES MADE TO GOOGLE SCANS

Google has currently has two copies of this volume available for download. In one copy, from about page 250 to the end, most right hand pages (containing Heiberg's Latin translation) are missing about .25 in of text from the *left* hand side. The other copy contains right hand pages that have illegible text in the lower *right* hand side. One volume is missing page 289.

Using Photoshop, I "grafted" the lower right hand side of the pages missing .25 in of text on the left hand side onto the pages with the illegible lower right hand side. Confused yet? :) The result is that all pages (except 289) are - as far as I can tell - perfectly legible.

I inserted a scan of page 289 from a library copy of volume 1.

---

## Euclidis Opera Omnia VOL 2

I have not made any changes to this volume, as it seems to have been satisfactorily scanned (i.e., all pages are included in order, with no illegible portions as far as I can tell). It seems to bear the mark of the Stanford University Library.

---

## Euclidis Opera Omnia VOL 3

### *Corrigenda*

#### APP. CRIT.

These are readings from another copy of the text of the lower left hand part of the *app. crit.* where it is illegible in the present PDF.

p. 1 last line: λαιστιαῖον

p. 18 last line: m. 1 P.

p. 40 third to last line: τήν ins. postea V.

second to last line: εστι m. 1 F.

last line: δεῖξαι] comp. P, om. Theon

p. 46 second to last line: κεντο F.

last line: θήσεται, ὅτι τὸ

p. 134 last line: ἐστὼ ] comp. F b,

p. 216 last line: m. 1 P.

### **PAGES REPLACED**

p86.

The *app. crit.* of p 86 was missing about 1/4 inch of text on the right hand side. Rather than try to recreate the entirety of it, I decided to replace the page with a scan from another copy of the text.

### **PAGES INSERTED**

pp. 334, 335.

These were missing in the original. They have been inserted from a scan of a library copy.

---

## Euclidis Opera Omnia VOL 4

*Corrigenda*

### TEXT

These are readings from another copy of the text, where the PDF is not legible.

p. 129 l 3. read: HZ, HΘ

### APP. CRIT.

These are readings from another copy of the text of the lower left hand part of the *app. crit.* where it is illegible in the present PDF

p 62. Last line: ρῶν αὐτοῦ

### CHANGES MADE TO GOOGLE SCANS

Google has two copies of this volume available for download. The better of them, which bears the mark of the Stanford University Library, contains seven pages that are at least partially illegible. Fortunately, these same pages were legible in the worse of the two copies. I therefore inserted the following pages from the “bad” copy into the Stanford copy **PAGES REPLACED**

p. 224,

p. 228,

p. 258,

p. 272,

p. 296,

p. 314,

p. 402.

*If you notice any imperfections with the scans I have posted, please bring them to my attention, and I will to my best to correct them. These texts must be preserved, and be preserved intact. Most copies of the Teubner series from this period (the late 1800's) are brittle to the touch, and neither*

*Teubner nor anyone else seems interested in reprinting them. These works are among the greatest achievements of the human mind and of Western Civilization, though many are in debt to the great Babylonian astronomers and mathematicians, who wrote in the Semitic language, Akkadian.*
